

# Weigh Your Options

**ConMet's CastLite<sup>®</sup> Brake Drums will save you up to 76 pounds per tractor while retaining all the strength of traditional cast drums.**

CastLite's unique shape is the key component in weight reduction by incorporating patent pending design features in both front and rear drums. Premium gray iron, the same material used in conventional cast drum designs, is shaped to optimize heat transfer and provide longer life.

Priced just above traditional cast drums and well below the competition, CastLite provides the lowest cost per pound of weight saved. It's another example of how ConMet is *pointing the way*<sup>™</sup> to more value for our customers.
